To Whom It May Concern,

It is with great pleasure that I write to express my interest in becoming a part of the team in participating with coding and programming. After studying several years throughout my high school and college education, I have discovered my passion for programming. I am continually trying to learn more knowledge with programming and understand each piece individually as well as a whole.

To pursue my interest, I have self-learned several languages outside of the institution, including Python, C++, Java and Machine Learning with TensorFlow. Inside the institution, I have worked hard to maintain my academic status as well as gaining deeper knowledge of programming. Most people's approach to a new language or field of study is to fulfill the minimum requirements. In my perspective, I will need to make sure I understand every step toward the problems and always ask myself if there are any other ways to make my steps more efficient.

I try to improve myself every time I do something new, and never give up improving my knowledge toward programming. Even though my background is mostly C++ due to the school's lectures, I never limit myself from exploring new fields and areas. I know that the field of computer science is changing rapidly, I will remain looking forward to my interest and pursuing my goal.

I have the enthusiasm of chasing new fields of computer science. With my computer science background and interest, I am willing to work with peers with new fields of knowledge and make the team stronger.

Please contact me at any time if you feel I would be fit for the team you are expecting.

Sincerely,  
Honghao(Aaron), Lin
