To Whom It May Concern,

It is with great pleasure that I write to express my interest in becoming a part of the team in participating with coding and programming. After studying several years throughout my high school and college education, I have discovered my passion for programming. I am continually trying to learn more knowledge with programming and understand each piece individually as well as a whole.

To pursue my interest, I have self-learned several languages outside of the institution, including Python, C++, Java, and Machine Learning. Inside the institution, I have worked hard to maintain my academic status as well as gaining deeper knowledge of programming. Most people's approach to a new language or field of study is to fulfill the minimum requirements. In my perspective, I will need to make sure I understand every step toward the problems and always ask myself if there are any other ways to make my steps more efficient.

I try to improve myself every time I do something new, and never give up improving my knowledge toward programming. I participated many programs that could enrich my academic knowledge, I was an officer of CS Club in Mount San Antonio College helping fellow students in making amazing projects such as personal portfolios with REACT and some amazing apps using android development with JAVA. In addition, I am a participant within Google's SPS program to build out a classroom sharing website with teammates. I know that the field of computer science is changing rapidly, I will remain looking forward to my interest and pursuing my goal.

I have the enthusiasm of chasing new fields of computer science. With my computer science background and interest, I am willing to work with peers with new fields of knowledge and make the team stronger.

Please contact me at any time if you feel I would be fit for the team you are expecting.

Sincerely,
Honghao(Aaron), Lin
